FH and IPSA:

a perfect match of different competences and technologies that converge in achieving a common goal: to improve lives of patients and healthcare operators by putting technology at their service.

All this making hospital logistics processes cost-effective.

Founded in Bolzano, Italy in 1948, leader in the production of hospital trolleys and storage systems, FH designs and produces **solutions** that cover the various stages of **hospital logistics**: from storage and transport to distribution.

FH's products are sold in more than 80 countries.

An Italian company, active for more than 20 years, offering innovative solutions based on high-tech products to improve organizational processes in healthcare.

IPSA develops and produces Smart Technologies for **patient safety** and **process optimization**, through intelligent devices with embedded software.

FH and IPSA: a whole ecosystem from the warehouse to the patient's bedside.

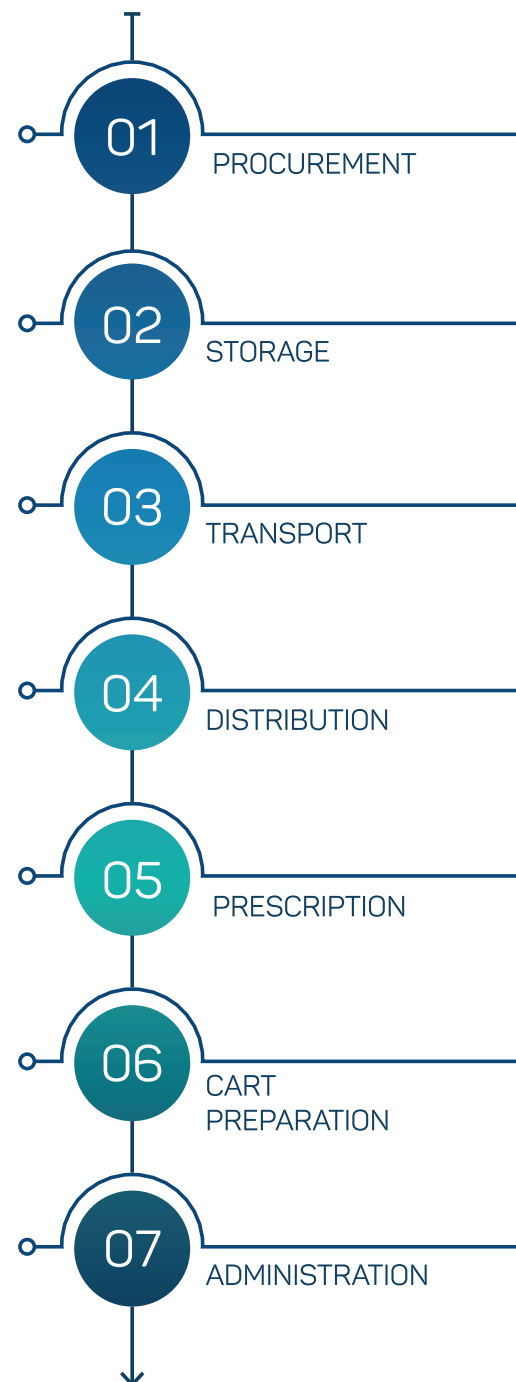

We offer **integrated and customized systems** to support hospital logistics processes: the **interaction of software**, automated and non-automated technologies, helps to **improve both the lives of healthcare operators and patients' safety**.

Our logistics solutions cover the entire healthcare supplies cycle by **optimisation of clinical** and **logistics processes**: from therapy preparation to inventory, from order management to bedside administration.

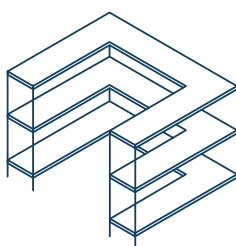

Smart hardware: usable, reliable, configurable, accessorized and modular.

Smart software: scalable, flexible & modular.

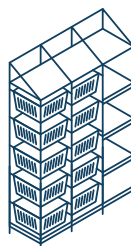

We move contents

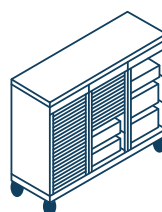

Distribution to Patients

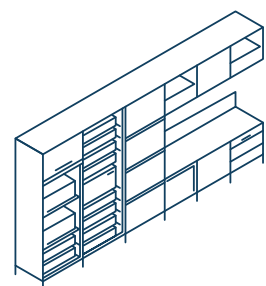

Warehouse storage

Pharmacy storage

Transport to Wards

Ward storage

Improve efficiency with smartness.

We provide different customized solutions for different approaches: our goal is to allow you to **reduce costs and optimize time improving the efficiency and the quality of care.**

Your
need

Our value
proposition

Varied approaches

Bespoke solutions

Interchangeability

ISO 600x400 compatibility

Progressive expansion

Scalable systems

Item tracking

Total traceability: warehouse to bedside

Safety

Reduction in errors

Cost control

Optimisation of stocks and purchases

SMARTHOSPITAL:

all of FH's knowledge in hardware, all of IPSA's expertise in software.

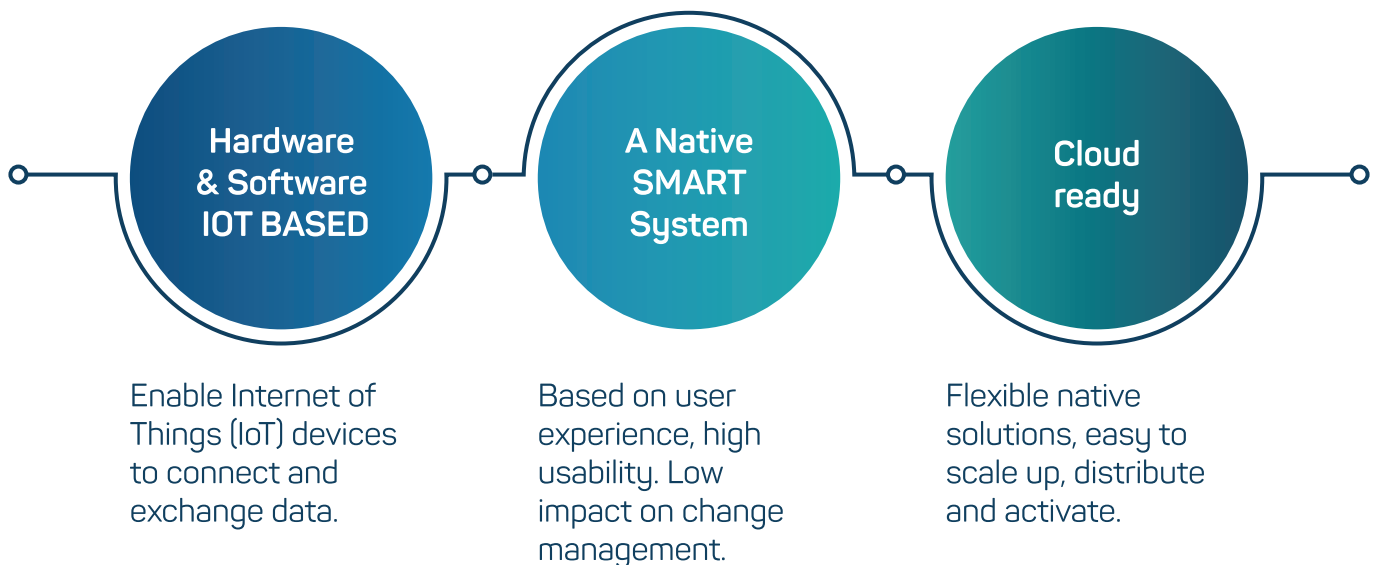

What are the benefits of choosing our solutions?

Optimize processes to improve the quality of care → healthcare operators get additional time for patient care.

Traceability features (track-and-trace) allow full responsibility.

The scalability and flexibility of the solutions fit different contexts and needs.

Sustainability → high return on investment.

Control of logistic activities

- Stock level control
- Automatic product counting
- Reporting of consumption to patient and cost center
- Lot and expiry management
- FEFO management
- Traceability of the specific package, by barcode or RFID
- Consignment stock management
- Real time inventory

Different wards with different needs.

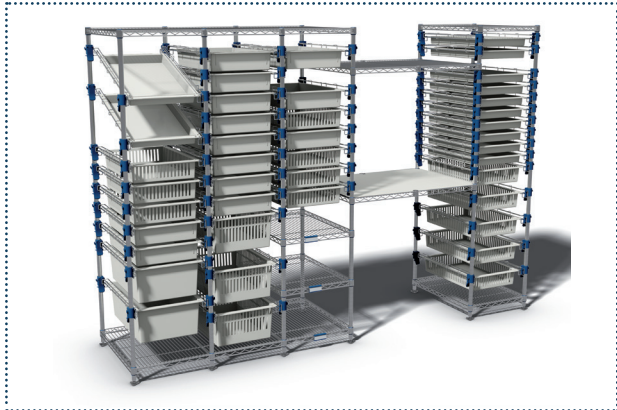

Different solutions for a unique approach aiming to improve the quality of care and reduce costs: we provide **solutions that cover the whole range of logistics from procurement to administration, in centralized or decentralized settings.**

In the hospital wards, the system involves the use of **Smart trolleys, Smart drawers and Smart cabinets** – with their embedded software – to support nurses in their storage and distribution activities.

The integration of the smart devices with the Hospital Information Systems **allows a full governance of the process.** Healthcare operators can better concentrate on patient care.
